QUANTUM SECURITY INTELLIGENCE

Security & Post-Quantum Readiness Audit Report

canton @ 4eab7a047040 · Digital Asset (Canton) — public repository (passive review)

Organization	QSI
Report date	2026-11-06 15:24 UTC
Report version	1
Audit run	72442494-7235-47fa-a4c5-315573a7a4ac · Document audit · 2026-11-06 15:24 UTC
Analyzer engine	qsi-engine 1.3.0
Risk profile	Crypto exchange, custodian or wallet
Content SHA-256	`efbd8a018afeed64113c4427d45e8d0033b998dc55ff0d735a440be80e9c9cb1`
Signature key (Ed25519, SHA-256 fingerprint; the signature is the separate file report.sig.json)	`5b3cf9c9bd0fa54447e2b5dfa7a6bab569bd0c666fa46949599e5c348d17083e`

Contents

1. Executive summary
2. Scope and boundaries
3. Methodology
4. Assets examined and not examined
5. Architecture overview
6. Overall security posture
7. Findings by severity
8. Detailed findings
9. Evidence
10. Post-quantum assessment
11. Limitations and assumptions
12. Remediation plan
13. Priorities for 30, 60 and 90 days
14. Verification after remediation
15. Tools used
16. Sources and normative documents
17. Appendices

This report presents automated and documented analysis results for the stated scope. It is not a legal opinion, a certification or an attestation of compliance with any standard.

Executive summary

17	0	4	9	4
Findings in total	Critical	High	Medium	Low

Classification	Count
Confirmed technical vulnerability	2
Known vulnerable component	0
Confirmed configuration error	2
Potential cryptographic risk	0
Long-term post-quantum risk	11
Improvement recommendation	2
Insufficient data	0

Top 5

ID	Severity	Detailed findings	Priority score
QSI-2026-19406	High	Private key material present in performance/src/main/console/tls/participant.pem	76.8
QSI-2026-19410	High	Private key material present in performance/src/main/console/tls/synchronizer.pem	76.8
QSI-2026-19403	High	Certificate has expired (localhost)	61.4
QSI-2026-19407	High	Certificate has expired (localhost)	61.4
QSI-2026-19399	Medium	Quantum-vulnerable ECDH: key wrapping and data encryption at rest (10 file(s)) preliminary	36.9

Mosca's inequality (x + y > z): x = 10, y = 5, z = 8 → migration would finish too late under this scenario. z is a planning assumption chosen per risk profile, not a prediction. A cryptographically relevant quantum computer is not publicly known to exist today.

Post-quantum maturity: Level 2 of 4 — post-quantum in use outside the critical paths. Next step: Extend post-quantum protection to the critical roles that stay classical, starting with what can be recorded today (wrapped keys, channel key exchange).

Scope and boundaries

Mode: Document audit

Repository: https://github.com/digital-asset/canton @ 4eab7a047040bb61798b66abde794c8cb27f7746 — evidence links open the lines at this commit.

Supplied inputs

3314 files, 26171202 bytes in total, 2 redaction(s); the per-file SHA-256 list is in appendix C.

Methodology

The audit was performed by the QSI engine 1.3.0. Each analyzer emits facts (rule, parameters, evidence); finding texts are generated from the rule catalog. Methodology sources are listed under "Sources and normative documents".

Prioritization uses an explainable weighted model (severity, exploitability, exposure, confidentiality/integrity/availability impact weighted by the "Crypto exchange, custodian or wallet" profile, asset criticality, urgency, ease of remediation) with a confidence multiplier. CVSS v3.1 is applied only to technical vulnerabilities with a defined vector. Long-term quantum risks use Mosca's inequality; their severity is capped at Medium and they are never presented as exploitable vulnerabilities.

Finding classes: confirmed technical vulnerability; known vulnerable component (a dependency version named in an advisory; whether the affected code is reachable is assessed separately, and a component confirmed by review becomes a vulnerability); confirmed configuration error; potential cryptographic risk; long-term post-quantum risk; improvement recommendation; insufficient data. Heuristic findings are marked preliminary; analyst decisions are shown next to the findings.

Coverage of checks

Area	Status	Count	Examples
source_code	checked	3154	base/adjustable-clock/src/main/scala/com/daml/clock/AdjustableClock.scala: 37 lines scanned with 16 rule patterns and 267 registry patterns; base/contextualized-logging/src/main/scala/com/daml/logging/ContextualizedLogger.scala: 50 lines scanned with 16 rule patterns and 267 registry patterns; base/contextualized-logging/src/main/scala/com/daml/logging/JsonStringSerializer.scala: 42 lines scanned with 16 rule patterns and 267 registry patterns
tls_code	checked	1	base/daml-tls/src/main/scala/com/daml/tls/TlsConfig.scala: TLS key-exchange settings read
certificates_and_keys	checked	4	performance/src/main/console/tls/participant.crt: certificates/keys parsed; performance/src/main/console/tls/participant.pem: certificates/keys parsed; performance/src/main/console/tls/synchronizer.crt: certificates/keys parsed
dependencies	checked	1	scripts/pyproject.toml: 0 dependencies parsed (0 pinned)
entropy	checked	1	random-number generation: 202 code files read with 0 macro definitions from the tree; 0 ineffective guard(s), 0 weak random-bytes provider(s), 0 weak key-generation site(s)
osv_advisories	not checked	1	no exactly pinned versions to query

Long lists are grouped here; the full per-file list is in the JSON report, signed with the same key.

Assets examined and not examined

Supplied inputs: 3160 (input files: C)

Not checked

- osv_advisories: no exactly pinned versions to query

Architecture overview

Static review of the source tree canton at 4eab7a047040bb61798b66abde794c8cb27f7746. 3314 files analysed; of 8786 files, 4254 are test, fuzzing, benchmark or example code and were left out, 1218 are not read by any analyzer, 0 exceed the per-file limit and 0 did not fit the total limit. Files no analyzer reads include: .ci/Dockerfile.canton-build, .ci/Dockerfile.query-stats-postgres, .ci/README.md, .ci/nix-exec, .ci/setup-docker-build-container.sh. 36 files in build-output or dependency-cache directories (.git, .hg, .venv, __pycache__, build, dist, node_modules, target, vendor, venv) were not read. No requests were sent to the owner's systems.

Overall security posture

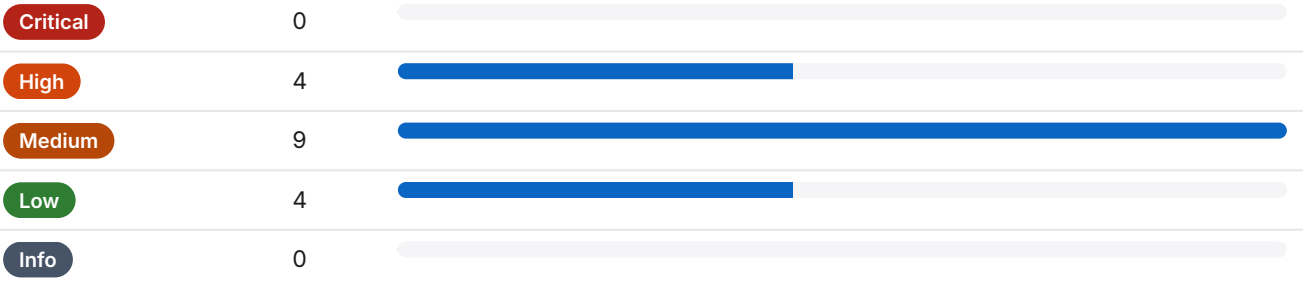

52
Indicative posture index (0–100)

47.4%
Quantum-vulnerable share of inventory

78
Cryptographic inventory

Derived from findings in scope (confirmed and potential issues weighted by severity). Indicative only; not comparable across differently scoped audits.

Findings by severity

ID	Detailed findings	Classification	Severity	Confidence
QSI-2026-19406	Private key material present in performance/src/main/console/tls/participant.pem	Confirmed technical vulnerability	High	High

Detailed findings

QSI-2026-19406 · KEY-PRIVATE-IN-INPUT

High

Private key material present in performance/src/main/console/tls/participant.pem

Confirmed technical vulnerability | Confidence: High

A 'PRIVATE KEY' block was found at line 1 of performance/src/main/console/tls/participant.pem. QSI redacted the key before storage; the original file still contains it.

Affected asset	file:performance/src/main/console/tls/participant.pem
Data source	performance/src/main/console/tls/participant.pem
Detection method	PEM header detection.
Analyzer	certificates 1.3.0 · 2026-11-06 15:24 UTC
Priority score	76.8 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	8.1 — CVSS:3.1/AV:N/AC:L/PR:L/UI:N/S:U/C:H/I:H/A:N

POTENTIAL IMPACT

Anyone with access to this file (repository, backups, CI logs) can impersonate the key owner or decrypt protected data.

REPRODUCTION STEPS

```
grep -n 'PRIVATE KEY-----' performance/src/main/console/tls/participant.pem
```

EVIDENCE

file_excerpt · performance/src/main/console/tls/participant.pem · line 1 · SHA-256 8ff5675e3f073e63… · File 41b6c1b1fe89bcc3…

```
Line 1: -----BEGIN PRIVATE KEY----- … [REDACTED BY QSI] … -----END …
```

LIMITATIONS OF THE CHECK

QSI cannot determine whether this key is in production use. The key value was not retained.

RECOMMENDATION

Treat the key as compromised: rotate it, revoke associated certificates, remove it from version history and store keys in a secrets manager/HSM.

RETEST PROCEDURE

Search the repository and its history for private key headers; confirm the old key is revoked.

OWASP Application Security Verification Standard

QSI-2026-19410 · KEY-PRIVATE-IN-INPUT

High

Private key material present in performance/src/main/console/tls/synchronizer.pem

Confirmed technical vulnerability | Confidence: High

A 'PRIVATE KEY' block was found at line 1 of performance/src/main/console/tls/synchronizer.pem. QSI redacted the key before storage; the original file still contains it.

Affected asset	file:performance/src/main/console/tls/synchronizer.pem
Data source	performance/src/main/console/tls/synchronizer.pem

Detection method	PEM header detection.
Analyzer	certificates 1.3.0 · 2026-11-06 15:24 UTC
Priority score	76.8 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	8.1 — CVSS:3.1/AV:N/AC:L/PR:L/UI:N/S:U/C:H/I:H/A:N

POTENTIAL IMPACT

Anyone with access to this file (repository, backups, CI logs) can impersonate the key owner or decrypt protected data.

REPRODUCTION STEPS

```
grep -n 'PRIVATE KEY-----' performance/src/main/console/tls/synchronizer.pem
```

EVIDENCE

file_excerpt · performance/src/main/console/tls/synchronizer.pem · line 1 · SHA-256 8ff5675e3f073e63… · File ce33b30d50711f87…

```
Line 1: -----BEGIN PRIVATE KEY----- … [REDACTED BY QSI] … -----END …
```

LIMITATIONS OF THE CHECK

QSI cannot determine whether this key is in production use. The key value was not retained.

RECOMMENDATION

Treat the key as compromised: rotate it, revoke associated certificates, remove it from version history and store keys in a secrets manager/HSM.

RETEST PROCEDURE

Search the repository and its history for private key headers; confirm the old key is revoked.

OWASP Application Security Verification Standard

QSI-2026-19403 · CERT-EXPIRED

High

Certificate has expired (localhost)

Confirmed configuration error | Confidence: High

The X.509 certificate with subject localhost expired on 2024-01-11 (1029 days ago).

Affected asset	certificate:localhost
Data source	performance/src/main/console/tls/participant.crt
Detection method	X.509 parsing (pyca/cryptography), comparison of notAfter with the analysis time (UTC).
Analyzer	certificates 1.3.0 · 2026-11-06 15:24 UTC
Priority score	61.4 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	not applicable

POTENTIAL IMPACT

Clients that validate certificates will refuse connections; users may be trained to ignore warnings.

REPRODUCTION STEPS

```
openssl x509 -in performance/src/main/console/tls/participant.crt -noout -enddate
```

EVIDENCE

certificate · performance/src/main/console/tls/participant.crt · line 1 · SHA-256 c295cd5380fb9201… · File 4a787543ae5ca065…

```
Subject: 1.2.840.113549.1.9.1=canton@digitalasset.com,CN=localhost,OU=PARTICIPANT,O=TESTING
Issuer: 1.2.840.113549.1.9.1=canton@digitalasset.com,OU=ROOT CA,O=TESTING

NIST SP 800-57 Part 1 Rev. 5 — Recommendation for Key Management

QSI-2026-19399 · CODE-QV-ASYMMETRIC

Medium

Quantum-vulnerable ECDH: key wrapping and data encryption at rest (10 file(s))

Long-term post-quantum risk | Confidence: Medium | preliminary — requires further verification

31 reference(s) to ECDH across 10 file(s), e.g. community/app-base/src/main/scala/com/digitalasset/canton/admin/api/client/data/crypto/Encryption.scala:57. Role, judged from paths, function names and nearby code: key wrapping and data encryption at rest. Keys or data encrypted to these public keys are stored: anyone who copies them now decrypts them once a CRQC exists (harvest now, decrypt later).

Affected asset	source-code:ECDH:key_wrapping
Data source	community/app-base/src/main/scala/com/digitalasset/canton/admin/api/client/data/crypto/Encryption.scala
Detection method	Regular-expression matching of crypto API patterns; the role comes from words in paths, enclosing function names and the lines around the matches.
Analyzer	source_code 1.3.0 · 2026-11-06 15:24 UTC
Priority score	36.9 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	not applicable
Mosca's inequality (x + y > z)	x=10.0, y=5.0, z=8.0 → migration would finish too late under this scenario

POTENTIAL IMPACT

Long-term risk depends on what the algorithm protects: signatures (authenticity until migration) or key exchange/encryption (retroactive decryption of recorded data).

REPRODUCTION STEPS

```
Open community/app-base/src/main/scala/com/digitalasset/canton/admin/api/client/data/crypto/
Encryption.scala:57 and inspect the quoted lines; the evidence lists further files.
```

EVIDENCE

```

LIMITATIONS OF THE CHECK

This is a forward-looking risk that depends on the arrival of a cryptographically relevant quantum computer (CRQC). No such computer is publicly known to exist today; the timeline is uncertain. It is not a present-day exploitable vulnerability. Heuristic pattern match on source text without data-flow analysis. The usage context (security-relevant or not) must be confirmed manually; treat as preliminary.

RECOMMENDATION

Wrap keys with ML-KEM or a hybrid KEM (X25519 + ML-KEM-768) and re-wrap the stored keys; data that may already have been copied needs its own assessment.

RETEST PROCEDURE

Re-run the inventory after refactoring.

P. W. Shor — Polynomial-Time Algorithms for Prime Factorization and Discrete Logarithms on a Quantum Computer (SIAM J. Comput., 1997); NIST IR 8547 — Transition to Post-Quantum Cryptography Standards; M. Mosca — Cybersecurity in an Era with Quantum Computers: Will We Be Ready? (IEEE Security & Privacy, 2018)

QSI-2026-19395 · CODE-QV-ASYMMETRIC

Medium

Quantum-vulnerable RSA: transaction and message signing (1 file(s))

Long-term post-quantum risk | Confidence: Medium | preliminary — requires further verification

1 reference(s) to RSA across 1 file(s), e.g. base/daml-jwt/src/main/scala/com/daml/jwt/JwtSigner.scala:59. Role, judged from paths, function names and nearby code: transaction and message signing. A CRQC derives the private key from a public key that is already known (on chain after the first spend, in reused addresses): funds and approvals controlled by these keys need a migration path.

Affected asset	source-code:RSA:transaction_signing
Data source	base/daml-jwt/src/main/scala/com/daml/jwt/JwtSigner.scala
Detection method	Regular-expression matching of crypto API patterns; the role comes from words in paths, enclosing function names and the lines around the matches.
Analyzer	source_code 1.3.0 · 2026-11-06 15:24 UTC
Priority score	35.6 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	not applicable
Mosca's inequality (x + y > z)	x=10.0, y=5.0, z=8.0 → migration would finish too late under this scenario

POTENTIAL IMPACT

Long-term risk depends on what the algorithm protects: signatures (authenticity until migration) or key exchange/encryption (retroactive decryption of recorded data).

REPRODUCTION STEPS

```
Open base/daml-jwt/src/main/scala/com/daml/jwt/JwtSigner.scala:59 and inspect the quoted lines; the evidence lists further files.
```

EVIDENCE

file_excerpt · base/daml-jwt/src/main/scala/com/daml/jwt/JwtSigner.scala · line 59 · SHA-256 a95c4fd7b998e483… · File bd4f2bfdc20d186f…

```
   58 |   final case class RSA256(privateKey: [REDACTED] kid: Option[String] = None) extends
JwtSigner {
   59 |     def alg = "RS256"
   60 |     def sign(jwt: DecodedJwt[String]): Either[Error, Jwt] =
```

LIMITATIONS OF THE CHECK

This is a forward-looking risk that depends on the arrival of a cryptographically relevant quantum computer (CRQC). No such computer is publicly known to exist today; the timeline is uncertain. It is not a present-day exploitable vulnerability. Heuristic pattern match on source text without data-flow analysis. The usage context (security-relevant or not) must be confirmed manually; treat as preliminary.

RECOMMENDATION

Follow each chain's post-quantum roadmap, avoid public-key reuse, and keep signers ready to add post-quantum signature schemes as chains adopt them.

RETEST PROCEDURE

Re-run the inventory after refactoring.

Quantum-vulnerable ECDSA: authentication and identity (certificates, tokens, device attestation) (1 file(s))

Long-term post-quantum risk | Confidence: Medium | preliminary — requires further verification

2 reference(s) to ECDSA across 1 file(s), e.g. community/ledger/ledger-api-core/src/main/scala/com/digitalasset/canton/ledger/api/auth/PartyJWTAuthService.scala:228. Role, judged from paths, function names and nearby code: authentication and identity (certificates, tokens, device attestation). Short-lived authentication stays safe until a CRQC exists; long-lived identities (device attestation, CA and SSH keys) need a plan earlier.

Affected asset	source-code:ECDSA:authentication
Data source	

	community/ledger/ledger-api-core/src/main/scala/com/digitalasset/canton/ledger/api/auth/PartyJWTAuthService.scala
Detection method	Regular-expression matching of crypto API patterns; the role comes from words in paths, enclosing function names and the lines around the matches.
Analyzer	source_code 1.3.0 · 2026-11-06 15:24 UTC
Priority score	34.2 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	not applicable
Mosca's inequality (x + y > z)	x=10.0, y=5.0, z=8.0 → migration would finish too late under this scenario

POTENTIAL IMPACT

Long-term risk depends on what the algorithm protects: signatures (authenticity until migration) or key exchange/encryption (retroactive decryption of recorded data).

REPRODUCTION STEPS

```
Open community/ledger/ledger-api-core/src/main/scala/com/digitalasset/canton/ledger/api/auth/
PartyJWTAuthService.scala:228 and inspect the quoted lines; the evidence lists further files.
```

EVIDENCE

file_excerpt · community/ledger/ledger-api-core/src/main/scala/com/digitalasset/canton/ledger/api/auth/PartyJWTAuthService.scala · line 228 · SHA-256 b387db4013948b4b... · File 6fdb3b2c533f518a...

```
227 |     private object ES256 extends Verifier {
228 |       def alg = "ES256"
229 |
```

file_excerpt · community/ledger/ledger-api-core/src/main/scala/com/digitalasset/canton/ledger/api/auth/PartyJWTAuthService.scala · line 241 · SHA-256 d700bd4aad607c06... · File 6fdb3b2c533f518a...

```
240 |     private object ES384 extends Verifier {
241 |       def alg = "ES384"
242 |
```

LIMITATIONS OF THE CHECK

This is a forward-looking risk that depends on the arrival of a cryptographically relevant quantum computer (CRQC). No such computer is publicly known to exist today; the timeline is uncertain. It is not a present-day exploitable vulnerability. Heuristic pattern match on source text without data-flow analysis. The usage context (security-relevant or not) must be confirmed manually; treat as preliminary.

RECOMMENDATION

Keep credentials short-lived and plan ML-DSA certificates, tokens and keys as the ecosystem supports them.

RETEST PROCEDURE

Re-run the inventory after refactoring.

P. W. Shor — Polynomial-Time Algorithms for Prime Factorization and Discrete Logarithms on a Quantum Computer (SIAM J. Comput., 1997); NIST IR 8547 — Transition to Post-Quantum Cryptography Standards; M. Mosca — Cybersecurity in an Era with Quantum Computers: Will We Be Ready? (IEEE Security & Privacy, 2018)

QSI-2026-19404 · CERT-QV-KEY

Low

Quantum-vulnerable RSA key in certificate (localhost)

Long-term post-quantum risk | Confidence: High

The certificate localhost uses a RSA 4096-bit public key, valid until 2024-01-11. RSA is broken by Shor's algorithm on a CRQC.

Affected asset	certificate:localhost
Data source	performance/src/main/console/tls/participant.crt
Detection method	X.509 public key algorithm identification.
Analyzer	certificates 1.3.0 · 2026-11-06 15:24 UTC
Priority score	36.5 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	not applicable
Mosca's inequality (x + y > z)	x=0.0, y=5.0, z=8.0 → time available under this scenario

POTENTIAL IMPACT

For authentication, risk materializes only once a CRQC exists while the key/certificate is still trusted. Certificates are short-lived, so the main concern is the PKI and long-lived roots/ intermediates.

REPRODUCTION STEPS

```
openssl x509 -in performance/src/main/console/tls/participant.crt -noout -text | grep -A2 'Public
Key Algorithm'
```

EVIDENCE

certificate · performance/src/main/console/tls/participant.crt · line 1 · SHA-256 c295cd5380fb9201… · File 4a787543ae5ca065…

QSI-2026-19405 · CERT-LONG-VALIDITY

Low

Leaf certificate validity of 730 days (localhost)

Improvement recommendation | Confidence: High

The end-entity certificate is valid for 730 days. Publicly trusted TLS certificates are limited to 398 days today, and CA/Browser Forum rules are reducing this further.

Affected asset	certificate:localhost
Data source	performance/src/main/console/tls/participant.crt
Detection method	X.509 validity period computation.
Analyzer	certificates 1.3.0 · 2026-11-06 15:24 UTC
Priority score	30.9 / 100 (Crypto exchange, custodian or wallet)
CVSS v3.1	not applicable

POTENTIAL IMPACT

Long-lived certificates extend exposure if the key is compromised and slow down algorithm migration.

REPRODUCTION STEPS

```
openssl x509 -in performance/src/main/console/tls/participant.crt -noout -dates
```

EVIDENCE

certificate · performance/src/main/console/tls/participant.crt · line 1 · SHA-256 c295cd5380fb9201… · File 4a787543ae5ca065…

Post-quantum assessment

	Key establishment (x = how long data must stay confidential; harvest now, decrypt later)	Signatures (x = how long signatures/ keys must stay trusted)
Data/key lifetime x	10	10
Migration time y	5	5
Assumed years to CRQC z	8 (early)	8
x + y − z	7 → migration would finish too late under this scenario	7 → migration would finish too late under this scenario

Planning assumptions: x for key establishment, x for signatures, y are the defaults of the risk profile “Crypto exchange, custodian or wallet”, not the client's figures; with the client's actual lifetimes the verdict can change.

Post-quantum maturity: Level 2 of 4 — post-quantum in use outside the critical paths

- In use: ML-DSA — community/app-base/src/main/scala/com/digitalasset/canton/admin/api/client/data/crypto/Signing.scala
- In use: ML-DSA — community/base/src/main/scala/com/digitalasset/canton/crypto/Signing.scala
- Classical only — key wrapping and data encryption at rest: ECDH (10 file(s))

Next step: Extend post-quantum protection to the critical roles that stay classical, starting with what can be recorded today (wrapped keys, channel key exchange).

Levels: 0 none; 1 present, not wired; 2 in use outside the critical paths; 3 hybrid in a critical path; 4 post-quantum by default in the critical paths (root of trust, key wrapping, channel key exchange). Judged from code and manifests.

What the quantum-vulnerable algorithms do

Role	Algorithms (files)	ID	First step
key wrapping and data encryption at rest	ECDH (10)	QSI-2026-19399	Wrap keys with ML-KEM or a hybrid KEM (X25519 + ML-KEM-768) and re-wrap the stored keys; data that may already have been copied needs its own assessment
transaction and message signing	ECDSA (1), Ed25519 (1), RSA (1)	QSI-2026-19395, QSI-2026-19396, QSI-2026-19397	Follow each chain's post-quantum roadmap, avoid public-key reuse, and keep signers ready to add post-quantum signature schemes as chains adopt them
authentication and identity (certificates, tokens, device attestation)	RSA (2), ECDSA (1), Ed25519 (1)	QSI-2026-19398, QSI-2026-19401, QSI-2026-19402	Keep credentials short-lived and plan ML-DSA certificates, tokens and keys as the ecosystem supports them

role not determined	ECDSA (9), RSA (2)	QSI-2026-19394, QSI-2026-19400	Classify each usage, record data lifetimes, and plan migration to ML-DSA (FIPS 204) or SLH-DSA (FIPS 205), in a hybrid/composite form where the ecosystem supports it; introduce an abstraction layer for crypto-agility

Roles are judged from file paths, function names and the code around each match; review confirms them. Root-of-trust keys and wrapped keys come first: they are hard to replace or can be recorded today.

z is a planning assumption chosen per risk profile, not a prediction. A cryptographically relevant quantum computer is not publicly known to exist today.

Quantum status	Count
weak classically	1
reduced margin (Grover), approved	20
Grover: acceptable to NIST, below ECCG/ANSSI guidance	18
post-quantum	2
vulnerable (Shor)	37

PQC readiness questionnaire

No readiness questionnaire was completed for this project.

Quantum algorithms relevant to this inventory

Quantum algorithm	Effect	Inventoried algorithms (rows)	What it means for this audit
Shor's algorithm — factoring Q1: quantum computation offline, classical access to the victim	breaks	RSA (8)	Breaks RSA at every key length: a longer modulus only raises the cost polynomially. Plan migration to ML-KEM (or a hybrid) for key establishment and ML-DSA / SLH-DSA for signatures; start with keys protecting data that must stay confidential for years (harvest now, decrypt later) and with long-lived signatures.
Shor's algorithm — elliptic-curve discrete logarithms Q1: quantum computation offline, classical access to the victim	breaks	ECDH (10), ECDSA (17), Ed25519 (2)	Elliptic-curve keys are expected to fall before RSA keys of comparable classical strength. On blockchains, coins whose public key is already on chain (reused addresses, pay-to-public-key and Taproot outputs) are exposed first; plan the move to post-quantum signatures and avoid key reuse in the meantime.

Grover's algorithm — key search and preimages Q1: quantum computation offline, classical access to the victim	weakens (larger keys restore the margin)	AES-128 (8), BLAKE2 (1), BLAKE3 (1), HMAC (20), IDEA (1), Keccak-256 (1), SHA-2 (7)	Not a break. 256-bit keys (AES-256, ChaCha20) keep a comfortable margin; AES-128 meets NIST category 1, while some authorities ask for 256-bit keys in quantum-resistant contexts (see the AES-128 entry). Prefer 256-bit keys for long-lived data; 256-bit hashes need no change for preimage resistance.
Brassard–Høyer–Tapp — collision search Q1: quantum computation offline, classical access to the victim	weakens (larger keys restore the margin)	BLAKE2 (1), BLAKE3 (1), Keccak-256 (1), SHA-2 (7)	256-bit hashes (SHA-256, SHA3-256) remain adequate for collision resistance; 160-bit hashes are already weak classically (SHA-1 collisions are practical). Use 384/512-bit hashes where NIST categories 4–5 are required.
Quantum lattice sieving Q1: quantum computation offline, classical access to the victim	included in standard parameters	ML-DSA (2)	No change for ML-KEM or ML-DSA at the standard parameter sets. A 2024 claim of a polynomial-time quantum LWE algorithm was withdrawn after a bug was found (see claims).

Effects: breaks — replace the algorithm; weakens — larger keys or outputs restore the margin; included in standard parameters — no action at standard parameter sets; only with superposition queries — not applicable to ordinary deployments.

Limitations and assumptions

- This report presents automated and documented analysis results for the stated scope. It is not a legal opinion, a certification or an attestation of compliance with any standard.
- z is a planning assumption chosen per risk profile, not a prediction. A cryptographically relevant quantum computer is not publicly known to exist today.
- osv_advisories — not checked: no exactly pinned versions to query

Remediation plan

QSI-2026-19406 · P1 · 30 days — short-term risk reduction

Revoke/rotate the key found in performance/src/main/console/tls/participant.pem immediately and restrict access to the file.

Rationale	Limits the window of misuse.
Expected outcome	The exposed key is no longer trusted.
Complexity	low
Dependencies	Key owner, CA access.
Side effects	Services using the key must be redeployed.
Tests before change	Identify all systems using the key (fingerprint).
Tests after change	Confirm revocation (CRL/OCSP) and new key in use.
Closure criteria	Old key revoked, new key deployed.

QSI-2026-19410 · P1 · 30 days — short-term risk reduction

Revoke/rotate the key found in performance/src/main/console/tls/synchronizer.pem immediately and restrict access to the file.

Rationale	Limits the window of misuse.
Expected outcome	The exposed key is no longer trusted.
Complexity	low
Dependencies	Key owner, CA access.
Side effects	Services using the key must be redeployed.
Tests before change	Identify all systems using the key (fingerprint).
