ONE-PAGE BRIEF

Post-quantum cryptography review: zodl-android @ 229dd3bff749

Client: Zodl (ex-Zashi, ECC) — public repository (passive review) · Source: github.com/zodl-inc/zodl-android, commit `229dd3bff749` · Reviewed: 2026-10-29 23:18 UTC · Risk profile: Crypto exchange, custodian or wallet

POST-QUANTUM MATURITY

Level 0 of 4

no post-quantum cryptography

FINDINGS

0 Critical **0** High **0** Medium **0** Low **2** Info

Next step: Inventory where classical public-key cryptography protects long-lived data and keys, and choose the first migration: usually a hybrid TLS key exchange and wrapped keys.

WHAT MATTERS MOST

No findings above informational.

Static review of source code and manifests; files analysed: 1609. No requests were sent to the owner's systems.

Full report, content SHA-256: `6d6fdd62ef733486842482cec3ae478f7c091edf0805840ded02a77a558a06b6`

Full report signature (report.sig.json): Ed25519 key, SHA-256 fingerprint `5b3cf9c9bd0fa54447e2b5dfa7a6bab569bd0c666fa46949599e5c348d17083e`. bundle.sig.json lists the SHA-256 of every file in this bundle and is signed too; verify-bundle checks it offline.

Preliminary findings need confirmation in the code; the full report gives the evidence, the limits of each check and how to re-test.
