ONE-PAGE BRIEF

Post-quantum cryptography review: noir @ 5c98fecd3fe6

Client: Aztec / Noir — public repository (passive review) · Source: github.com/noir-lang/noir, commit `5c98fecd3fe6` · Reviewed: 2026-11-04 19:10 UTC · Risk profile: Crypto exchange, custodian or wallet

POST-QUANTUM MATURITY
Level 0 of 4
no post-quantum cryptography

FINDINGS
0 Critical **2** High **4** Medium
3 Low **3** Info

QUANTUM TIMELINE (MOSCA: X + Y − Z)
Signatures: 10 + 5 − 8 = 7 → **too late**

Next step: Inventory where classical public-key cryptography protects long-lived data and keys, and choose the first migration: usually a hybrid TLS key exchange and wrapped keys.

WHAT MATTERS MOST

High QSI-2026-12247	**quick-xml 0.26.0 is affected by RUSTSEC-2026-0194** What to do: Upgrade to a fixed version (0.41.0).
High QSI-2026-12248	**quick-xml 0.26.0 is affected by RUSTSEC-2026-0195** What to do: Upgrade to a fixed version (0.41.0).
Medium QSI-2026-12241	**Quantum-vulnerable Pedersen commitment: threshold signing and MPC protocols (2 file(s))** preliminary What to do: Track post-quantum threshold signatures (NIST IR 8214C) and keep the protocol layer ready to swap the signature scheme; record which keys...
Medium QSI-2026-12239	**Quantum-vulnerable BLS12-381: role not determined (2 file(s))** preliminary What to do: Classify each usage, record data lifetimes, and plan migration to a post-quantum algorithm; introduce an abstraction layer for...

WHAT THE QUANTUM-VULNERABLE CRYPTOGRAPHY PROTECTS

Role	Algorithms	What to do
Medium threshold signing and MPC protocols	Pedersen commitment	Track post-quantum threshold signatures (NIST IR 8214C) and keep the protocol layer ready to swap the...
Medium role not determined	BLS12-381, ECDSA	Classify each usage, record data lifetimes, and plan migration to a post-quantum algorithm; introduce an...

KNOWN VULNERABLE COMPONENTS

Advisories for the versions in use: 6; unlikely to apply to this build: 1 (a Cargo feature that is off, affected functions not named in the code, or a platform that is not built); to review: 5.

Static review of source code and manifests; files analysed: 783. No requests were sent to the owner's systems.

Full report, content SHA-256: `53576c752dce86cf5dc0dd399bb2034f3d8c34d7beeb65f88d60194d782bdd41`

Full report signature (report.sig.json): Ed25519 key, SHA-256 fingerprint `5b3cf9c9bd0fa54447e2b5dfa7a6bab569bd0c666fa46949599e5c348d17083e`. bundle.sig.json lists the SHA-256 of every file in this bundle and is signed too; verify-bundle checks it offline.

Preliminary findings need confirmation in the code; the full report gives the evidence, the limits of each check and how to re-test.
